

Support for this submission can be found in the specification and claims as originally filed of the parent application, Application No. 09/319,167 (now issued as U.S. Patent No. 6,270,534). Specifically, this page was included as page 19 in the parent application to which the present application claims priority.

Application No. 09/319,167 was incorporated in the present application by reference as evidenced by the Transmittal Form, as copy of which is attached hereto. Accordingly, no new matter has been added.

As further evidence of Applicants' intention that this page be incorporated as part of the present application, Applicants point to the stamped filing receipt postcard, a copy of which is attached hereto, states that a "[c]opy of prior Application No. 09/319,167 consisting of 31 pages including abstract" was filed at the time of filing the present application. As the stamp indicates, the Patent Office acknowledged receipt of 31 pages. However, only 30 pages of the prior application were actually filed.

Accordingly, Applicants respectfully request consideration of the present application, including page 19, and timely allowance of pending claims 26-49.
